

## Prince Albert Aerial Lift Training

Prince Albert Aerial Lift Training - The mechanical access platform known as an aerial work platform is a machinery which provides access to places that are otherwise not accessible to people and other machine. Also called an aerial device or elevating work platform, the machine is often utilized to access high places. Maintenance and construction staff normally need to make use of aerial work platforms on the job. Firefighters utilize them for emergency access.

Designed for temporary application, aerial work platforms are different from elevators, which provide permanent access to high places. An aerial work platform is meant to be operated by a single individual, and could lift weights of not more than one ton. Several kinds have load limits that are higher. There are a variety of types of aerial work platforms; like for instance, there is a "cherry picker" and a "scissor lift".

A lot of the aerial work platforms are equipped along with compressed air connectors for power tools and electrical outlets. For specialist jobs, such as lifting frames for window glass, an aerial work platform can come together with special equipment.

People who want to operate an aerial lift machine have to undergo training. Typically, the members of a Health & Safety Committee and their representatives are responsible for the inspection of every machine and work areas and are also needed to undergo training. People training would learn aerial lifting device operation. They will also learn the regulations that apply to the safe operation of these devices. Rules vary in different provinces, and in federally regulated worksites.

Any worker who is required to be lifted by or work near an aerial lifting machinery must be told concerning possible hazards. In a general safety session, an Aerial Lift Training Video can be shown so as to educate all of the workers who work near them or are lifted by them.

Aerial Lift Training Program consists of modules focused on the following: Aerial Lift Devices and Operating Controls; Hazard Identification; Pre Operational Checks for Aerial Lift Devices; and Platform Positioning & Park Positioning. The program is meant to train workers on safely utilizing boom-supported, self-propelled elevated work platform and self-propelled, elevated work platform. A certificate will be given to workers who finish the program, signed by a qualified person to be able to confirm the successful completion of a hands-on practical evaluation.
