## **Prince Albert Zoom Boom Ticket**

Prince Albert Zoom Boom Ticket - Zoom Boom Training is designed to train operators on variable reach forklifts. The goals of the training are to impart an understanding of the physics of the machinery, and to outline the operator's responsibilities. This course follows North American safety standards for lift trucks. Zoom boom training and certification is obtainable at our site or at the company's location, provided there are a minimum number of trainees. Certification given upon successful completion is good for three years.

The telehandler or also known as a telescopic handler is similar in numerous ways to a common forklift or a crane. This helpful machinery is made along with a telescopic boom which can extend forward and lift upwards. Various attachments could be fitted on the end of the boom, like for instance bucket, pallet forks, muck grab or lift table. It is popular in industry and agriculture settings.

The telehandler is a common utilized with fork attachments to enable the shuttling of loads. Telehandlers have the advantage of being able to reach those inaccessible places that can't be reached by a common forklift. Telehandlers are capable of removing palletized loads from inside a trailer and placing them on places which are high like for instance rooftops. For certain applications, they can be more practical and efficient compared to a crane.

The disadvantage of the telehandler is its instability when lifting heavier loads. As the boom extends with a load, the unit becomes ever more unstable. Counterweights situated at the back help, but don't solve the problem. As the working radius increases, the lifting capacity rapidly decreases. Several machines come with front outriggers that extend the lifting capacity while the machine is stationary.
